Holmes' Hybrid Seed Corn

OHIO HYBRID K62 Here is indeed a wonderful Corn. We think it is the grandest Hybrid ever produced. Big ears, long, 18 to 22 rows of deep grain. The foliage is **very dark green**, and retains this color when the ears ripen. As to **heat and drought resistance**, it is not surpassed by any other. It's **borer resistant**. Its strong stalk and good roots make it stand best of all. It is adapted to a wide range of soils from poor to high and for northern states where yields have been consistently very high. Matures medium early, **100 days**. We highly recommend that you grow a crop of this our Hybrid. **Large flat kernels.**

Bu., \$9.00; 2 bus., \$17.50

HOLMES' EARLY 90-DAY. Has broad, deep grains of a beautiful golden yellow color. It produces a crop of the most perfectly uniform ears and has averaged 70 bushels of shelled Corn per acre. Holmes' Early matures in 90 to 100 days. The ears are 10 inches long with 14-16 rows of long, broad grains. The stalks grow from 8 to 10 feet high, giving an immense quantity of fodder. Farmers who planted Holmes' Early 90-Day for their main crop told us they grew one of the finest crops and best quality Corn.

Not a Hybrid Corn: 2 lbs., 70c; pk. (14 lbs.), \$2.00, postpaid. Not paid, bu., \$6.00; bag (2 bus.), \$11.50

OHIO HYBRID M15 The outstanding hybrid yet developed for midseason grain production. Stiff stalk, strong roots, good resistance to disease and insects. Ear medium sized with deep, smooth kernels. It dries out quickly in the fall and husks clean and easily by hand or with mechanical pickers. Yield is tops in its season.

OHIO HYBRID M20 It is as early as M15, giving high yields of sound yellow Corn. Ears are medium short, thick and heavy, 16 to 18 rows of dented deep grain. Fodder is dark green in color. Plants are more resistant to root-lodging and stalk-breaking than those of M15. Maturity 95 to 100 days.

PRICES ON HYBRID SEED CORN: Large Flat Grade and Medium Grade, \$8.50 per bushel; 2 bus., \$16.50. **FREIGHT PAID** to your station to points in Indiana, Michigan, Ohio, Pennsylvania, West Virginia and Maryland.

OHIO HYBRID M34 **EARLY—DEEP GRAIN HEAVY YIELD.** This early maturing hybrid is one of the heaviest yielders. The plants are dark green in color and hold their greenness well. The ears are medium sized with very deep kernels. Plants are resistant to blight. An excellent kind to use for hogging off or for early feed. Do not overlook this early hybrid as it has proven most valuable.

OHIO HYBRID K24 The midseason hybrid noted for best stalk and standing ability. Broad, dark green leaves, extensive, strong, healthy root. Produces more dry matter per acre than other varieties of the same maturity season that often appear larger, so is outstanding in value for silage production. Also desirable for grain production. Needs high fertility.

OHIO HYBRID K35 This early, heavy yielding hybrid has become a leader in northern Ohio. The plants are short and leafy. The ears are short, thick and have 14 to 18 rows of deep golden, dented grain. We are proud the way this hybrid has performed. Maturity 100 to 105 days.

OHIO HYBRID W64 This hybrid is making a reputation for itself all over Ohio. The plant is a very stiff-stalked kind which is most resistant to root lodging. Ohio W64 has shown excellent resistance to both Corn borer and blight. It is worthy of all the dependence you care to put in it, produces results.
Bu., \$9.00; 2 bus., \$17.50

U. S. 13 The most grown full-season hybrid yet developed. Strong stalk and roots, resists disease and insects and has high general vigor and wide adaptation for production of both grain and ensilage. On the average U. S. 13 out-yields all competing varieties.

Protection from wind, rain and insects. When properly set Hotkaps will withstand heavy winds and beating rains. They keep Melons and Cucumbers and Squash safe from the striped cucumber beetles which do so much damage to the young plants.

Ideal for Early Sweet Corn, Melons, Cucumbers and Tomatoes. Corn comes up quicker and grows faster, Tomatoes can be set out earlier with Hotkaps. Cucumbers and Melons are not stunted by bad weather or insects, and many other crops do better if started with these protectors.
